

Product sheet | **365 Posted Doc Editor**

Extension for Microsoft Dynamics **365 Business Central**

In case there are last minute changes

The objective of 365 Posted Doc Editor is to give the user the possibility to modify certain fields in the registered purchase and sale documents.

The fields that can be modified will be descriptive fields, which can help users to better differentiate the operation carried out, change data of the customer or supplier address.

At no time may fields that can modify accounting entries, VAT movements, customer or supplier movements, as well as quantities and amounts or products invoiced or paid, may be modified.

What you can do, and it will be very useful, is that it allows you to modify the supplier invoice or credit number and the registration text in the purchase operations; and the external document number and registration text in sales operations.

If these fields are updated, accounting movements, VAT movements and customer / supplier movements will be modified, but only affecting descriptive fields used in searches.

With the **365 Posted Doc Editor** extension you will be able to make small changes to your registered sales and purchase documents

Simple to set up

Just by activating a check box.
